Abstract

At present, a microscopic corona virus has not yet emerged from the terror that has created in America, the most powerful country in the world, as well as other countries like: - England, Italy, Germany, Spain, France, Russia, China, India The economies of other Asian and African countries have staggered. No country in the world has been untouched by this. People all over the world have become victims of death due to this coronavirus. Still its havoc continues, its terror has not stopped in almost the whole world. Day by day it is posing challenges to the entire world community and it is posing health and livelihood problems in front of us in new and dangerous forms. The whole world community is plagued by coronavirus.

Key words:- Pandemic, Corona, Diseases, Epidemic, Effective, Suggestion)

Introduction

In the present time, humans have established new dimensions in the field of knowledge-science, medicine and research, but still some challenges are coming in front of us in the form of this virus, which we have to get rid of and the human race will face dangerous diseases in future. It is to be protected from epidemics and many critical calamities and problems.

The governments of all the countries of the world seem helpless due to this pandemic. This has adversely affected the livelihood and lifestyle of the people. For the safety of mankind, all countries accepted the lockdown as a last resort and a lockdown was imposed to get rid of the epidemic.

Due to the closure of the means of employment and livelihood, the problem of starvation has arisen among the people. Today we are setting new dimensions in the field of science, so what is their justification? It is a subject of contemplative research and analysis. We talk about establishing life on the Moon and Mars, but when we are not safe on Earth itself, then this development and progress of ours is in vain. Today in every walk of life we are directly and indirectly affected by this pandemic.

Condition and Direction of Education

Along with our basic necessities for the all-round development of life, education is also very important for us, but in the present times due to the pandemic, our education system has been badly affected. All educational institutions, schools, colleges, coaching institutes etc. have been closed. So now the question arises in front of us that how can there be all round development of children without education and in educational institutions? How can it be done? What other options do we have in front of us at such times? They have to be explored, this is the need of the hour and this is a matter of debate. We have to do some special important research and corrective work in this direction, only then the future can be secure.

The Serious Global Impact of the Corona Pandemic on Education

Due to the Corona epidemic, the closure of schools, colleges and educational institutions across the world has caused obstacles and problems in the education of children and due to which the Central and State Governments have to be strengthened to compensate for the damage caused to the education of children. Steps have to be taken and some corrective and effective work has to be done in this direction so that the education of the children is not affected.

Developed, developing and underdeveloped countries, or their central and state governments, lacked adequate educational resources at the time of the pandemic, so that children appeared helpless when there was a sudden disruption in their education.

In Asian countries such as India, Pakistan, Bangladesh, Nepal, Sri Lanka and the continent of Africa, the situation became even more serious. In the rural and remote areas of these countries, where there is not enough availability of electricity, transport, communication facilities, medical, technology, internet service, etc., the education of the children ended suddenly.

Due to lack of effective and adequate means of distance education with the central and state governments, the students could not get the learning material. The central and state governments lacked effective policies, resources and infrastructure to introduce online education, due to which all children could not get education equally.

All governments have to take policy and better decisions to compensate for the damage caused to the education of children due to this sudden disaster all over the world. To make education more accessible, accessible, equitable for all, a strong education system should be rebuilt so that the availability of education for children is better provided.

Due to the loss of sources of employment and livelihood due to Kovid-19, the income of the people was adversely affected, due to which parents are unable to access smartphones, mobiles, internet etc. to provide online education to their children. Due to overpopulation and lack of employment opportunities in countries like India, Nepal, Pakistan, Sri Lanka, Bangladesh, etc., most of the citizens of these countries could not provide expensive mobiles and educational materials, tools etc. for their children and these countries Internet connectivity is not sufficient in remote and inaccessible areas and even in villages and even in cities, due to which a large section of students has been greatly affected by being deprived of education during the Corona period.

An article was published in a report by Human Rights Watch, London that "according to UNESCO the education of nearly 90% of school going children worldwide has been disrupted by the pandemic. Even students who have returned to their classes or Evidence suggests that he will continue to feel the effects of the loss of studies during the pandemic for many years to come.

" Therefore, to overcome this loss and disruption in education, the central and state governments should remove inequalities, defects etc. in their education system, ensure basic government services like cheap and smooth electricity to the citizens and provide cheap internet facility. Apart from this, proper arrangements should be made by the government to provide digital teaching-learning to the students and teachers so that they can use these technologies safely and with confidence.

To provide inclusive and quality education to the students and to make effective programmes, policies and policies to bring back the children who have dropped out during the pandemic and to launch a holistic education campaign.

For this, governments are determined to strengthen the inclusive, public education system at the national and international level and for this they should motivate donors to come forward so that the work of funding for education can be done.

To compensate for the serious disruption caused in the education of students due to the global pandemic, all the countries of the world should arrange free education for the education of children as soon as possible. If this does not happen, then a large part of the future generation of the world will not be able to prepare for the new construction of the world in future, due to which the whole world may have to bear the brunt.

Therefore, the central and state governments should make proper, speedy and free arrangements for the education of children and play their part in building a new world.

Therefore, in such a critical situation, not only in India but in all the countries around the world, education had a serious global impact due to the epidemic. The governments there, using their resources properly, did many things in the direction of education, but still they are not enough. We have to increase, upgrade and develop the scope of our knowledge-science, technical science, research etc. Because as far as I think online education has not been accessible to all the people, for this we have to find many more ways through which Through this, speedy and proper education can be made accessible to all at free or low cost, no one can be deprived of the right to education.

Suggestion for Parenting

It is also the responsibility of the parents that while taking online education, they should keep a constant eye on their children, nowadays many types of unnecessary materials, information, movies etc. are filled on the internet, due to which there is an adverse effect on the soft mind and brain of the children. They need to be aware that what children are learning while studying on mobile, internet, TV etc.? What are you receiving? This needs to be seen, otherwise it will have many side effects on the mind of the children and they will suffer from mental diseases and can move towards the world of crime.

Suggestion for the Teachers

Teachers are the nation builders, society and families keep a lot of hope from them for the all-round development of their children and they expect that teachers will impart their knowledge and experience to the children with the spirit of complete devotion and dedication so that they can develop in future. To provide proper leadership to the nation and contribute to its development and new construction.

Therefore, whatever the medium of teachers, online or offline, while educating their students, complete preparation of their subject matter, discipline in the classroom, punctuality, and new teaching policies, methods, innovation and technology etc. through all types of children like:- Psychological and social study of gifted, average intelligence, weak and retarded children and educated them in a psychological way would be best. This will increase the ability of learning and attention in the children and they will be able to prepare their life for the future, contribute to the service of the country and give proper leadership. For this, teachers need to continuously increase their knowledge base and keep themselves fully prepared according to the demand of the time.

Suggestions for Government and Political Parties

At the time of this global pandemic, it is also the responsibility of the government and political parties to make their invaluable contribution in resolving the problems of the people without any selfishness or political gain through mutual cooperation and work with the spirit of all welfare and For this, they need to change their ideology, policies, thinking style etc. so that a better democracy can be established in the country. Our constitution makers had also composed the world's best constitution with this hope and hope so that the coming generations can keep it safe and protect.
