ABSTRACT:-BACK GROUD-In Ayurveda *Santarpananimitta Rogas* are over nutritional diseases like *Pramehapiddka, Kotha, Kandu, Pandu, Javara, Kustha, Aampradosha, Mutrakrichha* etc. Polycystic ovary syndrome (PCOS) is a syndrome manifested by amenorrhea, hirsutism and obesity associated with enlarged polycystic ovaries. Depression, stress, laziness are other common symptoms. The symptoms of PCOS closely relate to the manifestation of *Santarpananimitta roga*. **AIM & OBJECTIVES-**To evaluate the effect of *HaritakiChurna* with *Madhu* and *Puran Guda* on BMI, symptoms of PCOS, size and number of ovarian cysts etc. **METERIAL AND METHODS:** - Randomly selected 30 patients in 2 groups for 60 day. In Group-A, given *Haritaki Churna* (4gm) with *Madhu* (3gm) and in group-B, given *Haritaki Churna* (4gm) with *PuranGuda* (3gm). **RESULT-**% relief in both group **MENSTRUATION FEATURES** (Interval G-A -88.26%, G-B-81.82%, Duration G-A- 61.85%, G-B -78.57%, Amount G-A -72.73%, G-B -70.38%, Dysmenorrhea G-A-79.97% G-B-82.35%, Character of bleeding G-A -86.36%, G-B-70.38%, Color of menstruation G-A-70.97% & G-B-71.39%), **Medorog& others-** (*Ch Sphik Udara Darstana*-G-A-63.64%, G-B 22.21%, *Gatra Daurgandhya* G-A-57.14% G-B- 66.66%, *Kshudhatimatrama* G-A 82.37% G-B 66.66% *Pipasatiyoga* G-A-73.66% G-B-69.22%, *Daurbalya* G-A-63.61%, G-B 75%, *Javaparodha* G-A-65.01%, G-B-68.40%, *KrichchaVyavayata* , G-A -81.22%, G-B-64.28% , *Gurugatrata* G-A-86.36 % G-B-68.16%, *Alasya*-G-A -89.42%, G-B-66.66%, *Tandra* G-A-72.22%, G-B-87.46%). Both group also

showed significance in Lab. Investigations. **DISCUSSION**-*Acharya Caraka* has mentioned various diets and drinks for treatment of *Santarpananimittavikar as* that all eviate *Vata* and *Kapha* and reduce fat. He has mentioned use of *Haritaki* with *Madhu* and *Guda* for these types of disease. **CONCLUSION**-Both group showed significance in both group

Key Words: -*Santarpananimitta Roga*, PCOS, *Haritaki Churna*, *Madhu & Puran Guda*

INTRODUCTION:

Ayurveda has classified diseases from various points of view; *Santarpananimitta* and *Aptarpannimittavikara* are one of the types of diseases based on over nutrition and malnutrition.ⁱThe term *Santarpana* means nutrition of the *Saptadhatu* of body. When this is in excess or not balanced then it leads to causation of diseases which are now days known as lifestyle disorders. *Acharya Carak* has mentioned *Nidana* of *Santarpanothavyadhi* as *Snigdha*, *Guru*, *Madhura*, *Pichhiladravya*, *Navanna*, *Navmadya*, *Anupamansa* (non-vegetarian diet), *Gorasa*, *Gudavikara*, *Pihstaanna* as dietary one and laziness, habit of day sleep, use of luxurious life devoid of physical activities as behavioral oneⁱⁱ.

The diseases which are caused due to over nutrition are *Pramehapiddka*, *Kooha*, *Kandu*, *Pandu*, *Javara*, *Kustha*, *Aampradosha*, *Mutrakrichha*, *Arochaka*, *Tandra*, *Klaivya*, *Atistholya*, *Alasya*, *Gurugatrata*, *Indriya* & *Srotaslepa*, *Buddhimoha*, *Pramillaka*, *Shooha* etcⁱⁱⁱ. This can occur as single manifestation or as a cluster of symptoms or diseases. One of such manifestation is PCOS (poly cystic ovarian syndrome). It is not directly mentioned in *Samhitas* but the symptoms of PCOS can be seen in examples of *Santarpananimittavikar as*. Polycystic ovary syndrome is very common condition affecting women. Due to changes in life style, bad food habits, work load etc. women face a lots of health issues. PCOS is a syndrome manifested by amenorrhea; hirsutism and obesity associated with enlarged polycystic ovaries. Depression, stress^{iv}, laziness are other common symptoms. The symptoms of PCOS closely relate to the manifestation of *Santarpananimitta roga*.

The prevalence of polycystic ovarian syndrome among infertile women ranges from 0.6% to 4.3% and among women of reproductive age group estimates made on the basis of morphological and hormonal criteria ranges from 3.5 to 7.5%.^v Polycystic ovary syndrome (PCOS) is a hyper-androgenic condition characterised by prolonged oligo-anovulation and polycystic ovarian morphology^{vi} It's frequently linked to psychological issues like depression and other mood disorders, as well as metabolic issues like insulin resistance and compensatory hyperinsulinemia, which are known to play role in androgen production and metabolism.^{vii}

Acharya Caraka has mentioned various diets and drinks for treatment of *Santarpananimittavikar as* that alleviate *Vata* and *Kapha* and reduce fat. He has mentioned use of *Haritaki* with *Madhu* for these types of diseases^{viii}.

AIM AND OBJECTIVES: -

1. **Primary Outcome**-To evaluate the effect of *Haritaki Churna* with *Madhu* and with *Puran Guda* on BMI, symptoms of PCOS, size and number of ovarian cysts etc.
2. **Secondary outcomes**-Effect on LH, FSH.

MATERIAL AND METHODS:-

- **Selection of patients-** The study was conducted on clinically diagnosed patients of PCOS from OPD & IPD of NIA JAIPUR. A written information and consent form had been given to the selected patients. The patients were divided into two groups randomly name A and B. Total 30 patients' were completed the study.

Criteria for the selection of the patient:**A. INCLUSION CRITERIA**

- PCOS patients with age between 16-35 years suffering from any of the two features in the following–
- Patients having mid body obesity (BMI 26-40)
- Patient suffering from oligomenorrhea. (Duration of flow less than 2 days, interval between 2 cycles exceeding more than 35 days).
- At least one ovary showing PCOD (diagnosed by USG) {ESHRE/ASRM-Rotterdam revised criteria for PCOD, 2003}

B. EXCLUSION CRITERIA:

- Pregnant women, lactating mother & taking OCPs.
- Patients with BMI less than 26.
- Patient having congenital and structural abnormalities of uterus and adnexa, physiological in frequent menstruation, drug induced amenorrhea/oligomenorrhea.
- Suffering from pelvic pathology including fibroid uterus, cervical polyp etc.
- Suffering from any systemic diseases. HB levels less than 7 gm% and other etiologies (CAH, thyroid dysfunction, hyperprolactinemia, Cushing syndrome, HIV, VDRL, HBsAg positive etc.)

STUDY DESIGN:-

- **CTRI Registration number :-** (CTRI/2021/12/038533)
- **Ethics committee approval:-** IEC/ACA/2020/3-12
- **Study type:** Randomized Clinical Study, Open label
- **Sample Size: 30, Duration of trial:** Two consecutive cycles (60 days)
- **Follow up -** During trial and monthly up to two months after the completion of trial.
- **Trial Drug and Dose**

Group	Drug	Botanical name	Usable Part	Dose and Anupana
Group-A	Haritaki	<i>Terminalia chebula</i>	Phala (powder)	4gm with Madhu (3gm)
Group-B	Haritaki	<i>Terminalia chebula</i>	Phala (powder)	4gm with Guda (3gm)

ASSESSMENT CRITERIA –Effect on menstrual flow and regularity and Symptoms of *Medo roga*, *Daurbalya*, *Gurugatrata*, *Alasya*, *Tandra*, *Pramilaka*.

OBSERVATION-DEMOGRAPHIC AND SYMPTOMATIC

DEMOGRAPHIC

Age-in the study maximum 60% was in 20-25 yrs, Religion-Maximum 96.6% was *Hindu*, 63.33% patients were unmarried. In education maximum 70% were graduate, Occupation: maximum 80% patients were students, Socioeconomic: 53.33% were lower middle class, Family history: 26.66% were founded with family history, Contraceptive History: Data of this present study shows 37.5% were on oral pills and 37.5% also patients were in condom contraception group, Rasa Dominance- maximum 23.33% were taken in *Katu*, Diet-86.66% patients were vegetarian, Data showing present study is that maximum no. of patients 25(83.33%), Sleep- maximum 56.66% patients were with disturbed sleep, Data shows in this present study is maximum no. of patients 11 (36.66%) were with present tiredness. *Vishmagni* -maximum 76.66% were with *Vishmagni*,

OBSERVATION ON DIETARY HABITS

Data showed in the present study are *Paishtikanna* (80%), *Navanna* (100%), *Snigdha*, *Guru*, *Madhura* (80%) *Diwaswap* (60%), *Avyayam* (73.33%), 53.33% *Ratri Jagaran* and *Chestadvashi*.

OBSERVATION ON MENSTRUATION FEATURES

Duration of menstruation -Maximum 36.66% patients have menstrual period within 1-2 days, 30% of patients have menstrual period within 3-5 days. **Menstrual interval** - Maximum 56% of patients have Interval of menstruation is 36-45 days, 30.0% of patients have Interval of menstruation is 21-35 Days. **Amount of blood loss**-Maximum 66.0% of patients have scanty blood loss during menstruation, 30% of patients have excessive blood loss during menstruation. **Dysmenorrhea** -Maximum 50.0% of patients have severe pain during menses, 46.66% of patients have moderate pain during menses. **Character of bleeding**-Maximum 43.33% patients have sometime big clots, 40% patients have every menstrual period small clot. **Color of menstrual blood**-Maximum 46.66% patient have brown color during menstruation, 33.33% patient has blackish color during menstruation.

OBSERVATION ON OTHER SYMPTOMS:-

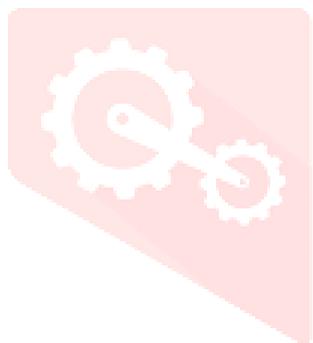

Pramilak-Maximum 50.0% of patient have stressed some times, 36.66% of patient have generally stressed. **Alasya**- Maximum 76.66% patients were with satisfactory work with, 23.33% patients were not. **Drowsiness (Tandra)**-Maximum 60% patients have sometime drowsiness, 26.66% patients have mostly drowsiness. **Gurugatrata (heaviness)** - 60% patients feel heaviness in body but it does not hamper routine work, 33.33% patients feel heaviness in body which hampers daily routine work.

RESULT

All the results are calculated by using Software: In StatGraphpad3. **STATISTICAL ANALYSIS:** P value = <0.0001, Extremely Significant, P value = 0.0001 to 0.001, Highly Significant, P = 0.001 to 0.01 Very

DISCUSSION

Effect of therapy on:-Symptomatic improvement

- **INTERMENSTRUAL PERIOD:** - After treatment, in Group- A the % of relief was observed 88.26% and in Group-B the % of relief was observed 81.82%. So Group-A showed better result comparatively Group-B (TableN-1). This was due to *Haritaki* with *Madhu* for continued 60 days of menstrual cycle. *Haritaki* has also been mentioned as *Sarvarogasamni*, *Doshanulomni*, *Deepani-Pachani*, *Srotovibandhanashaka*, *Ayushya*, *Paustiki*, *Vayasthapni*^{ix} and best among *Pathya*^x. Thus, *Haritaki* helps in *Klaivyanasa*, *Angavsadnasa*, *Amapachana*, *Vatatanulomana*^{xi} and has *Tridoshamak* property. *Madhu* is *Kaphashamka* because of its *Tikshan*, *Ruksha*, *Kashaya*^{xii} properties.
- **DURATION OF MENSTRUAL BLEEDING:** - In Group-A relief was observed 61.85% and in group-B % of relief was observed 78.57%, So both the groups showed significant result but comparatively Group-A showed better result (TableN-1).
- **AMOUNT OF BLEEDING:** - In Group-A % of relief was observed 70.38%, and in Group-B relief was observed 72.73% So Group-B showed better result comparatively Group-A. Group-B Significant obtained discussion in menstrual complaints (duration of menses & amount of bleeding) may be due to the *Srotoshodhana*, *Kapha Smana*. *Agnideepana* and *Vatanulomana* properties of the trial drugs. (TableN-1)
- **PAIN ASSOCIATED WITH MENSTRUATION:** - In Group-B relief was observed 79.97% and in Group-A observed 82.35%. *Haritaki* and *Madhu* have *Vata Shamak* properties thus relived pain during menses. (TableN-1)
- **CHARACTER OF BLEEDING:** - In Group-A % of relief was observed 86.36%. In Group-B the relief was observed 70.38%. (TableN-1)
- **COLOUR OF MENSTRUATION:** - In Group-A % of relief was observed 70.97%. In Group-B % of relief was observed 71.39%. (TableN-1)
- **CHALASPHIK UDARA STANA:** - In group-A relief was observed 63.64%, and in group-B relief was 22.21%. Comparatively result of group-A was better probably due to *Lekhan*, *Laghu*, *Rukshya*, *Grahi*, *Sukshma*, *Vishada Guna* of *Madhu*. (TableN-2)
- **GATRA DAURGANDH:** Improvement in *Daurgandhya* was seen in Group-B, 66.66%, and in

group-A % relief was 57.14%. Comparatively result of group-B was better. (TableN-2)

- **KSHUDHATIMATRAMA:** - Improvement in *Kshudhatimatrama* was seen Group-A, was 82.37%. In group-B % relief was 66.66%. Comparatively result of group-A was better than group-B. (TableN-2)
- **PIPASATIYOGA:** - Improvement in *Pipasatiyoga* was seen in Group-A, was 73.66%, and in group-B % relief was 69.22%. Comparatively result of group-A was better than group-B. (TableN-2)
- **DAURBALYA:** - Improvement in *Daurbalya* was seen in Group-A, was 63.61% and in group-B was 75%. Comparatively result of group-B was better than group-A. (TableN-2)
- **JAVAPARODHA:** - Improvement in *Javaparodha* was seen in Group-A, was 65.01% and in group-B % relief was 68.40%. Comparatively result of group-B was better than group-A. (TableN-2)
- **KRICHCHAVYAVAYATA:** - Improvement in *Krichchavyavayata* was seen Group-A, was 81.22% and in group-B was 64.28%. Comparatively result of group-A was better than group-B. (TableN-2)
- **GURUGATRATA:** - Improvement in *Gurugatrata* was seen in Group-A, was 86.36% in group-B % relief was 68.16%. Comparatively result of group-A was better than group-B. (TableN-2)
- **ALASYA:** - Improvement in *Alasya* was seen in Group-A, was 89.42% and in group-B % relief was 66.66%. Comparatively result of group-A was better than group-B. (TableN-2)
- **TANDRA:** Improvement in *Tandra* was seen in Group-A, was 72.22% and in group-B % relief was 87.46%. Comparatively result of group-B was better than group-A. (TableN-2)
- **PRAMILAKA:** - Improvement in *Pramilaka* was seen in Group-A, was 76.00% and in group-B % relief was 16.66%. Comparatively result of group-A was better than group-B. (TableN-2)

DISCUSSION ON LABORATORY PARAMETER :- (Table N-4)

- **HB%:-** In group-A, improvement was 1.06% which was 2.57% in group-B. Hb% was found to be increased in both group-But comparatively group-B was better reason behind this may be correction in *Rasvaha Srotorodh* and *Dhatvagni*.
- **ESR:-** In group-A, improvement was 21.98% which was 17.27% in group-B. ESR was found to be decreased in both groups. Results were statically significant in both the groups but comparatively group-A was better.
- **S.FSH:-** In group-A, improvement was 52.42% extremely significant which was 23.53% very significant in group-B. The drug was found effective in both groups but comparatively group-A was better.
- **S.LH:-** In group-A, improvement was 58.60% extremely significant which was 59.80% extremely significant in group-B. The drug was found effective in both group-But comparatively group-B was better.

- **INSULIN:** - In group-A-Improvement was 34.42% very significant which was 17.87% very significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **S.TESTOSTERONE:-** In group-A, improvement was 16.03% statistically significant which was 7.19% extremely significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **PROGESTERONE:-** In group-A, improvement was 71.28% E. significant which was 66.08% E. significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **ESTROGEN:-I** In group-A, improvement was 44.94% E. significant which was 36.38% E. significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **SHBG:** - In group-A, improvement was 11.47% very significant which was 5.64% E. significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **ANDROSTENEDIONE:** - In group-A, improvement was 35.12% very significant which was 7.19% E. significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **NO. OF FOLLICLE (RT):-** In group-A, improvement was 23.41% extremely significant which was 13.97% E. significant in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **NO. OF FOLLICLE (LT):-** In group-A, improvement was 17.02% (extremely significant) which was 12.80% (E. significant) in group-B. The drug was found effective in both group-B, but comparatively group-A was better.
- **OVARIAN VOLUE (RT):-** In group-A, improvement was 25.13% (extremely significant) which was 14.37% (E. significant) in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **OVARIAN VOLUME (LT):-** In group-A, improvement was 28.08% (extremely significant) which was 6.25% (E. significant) in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **ENDOMETRIAL THICKNESS (RT):-** In group-A, improvement was 16.45% (significant) which was 7.17% (significant) in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **ENDOMETRIAL THICKNESS (LT):-** In group-A, improvement was 15.08% (significant), which was 7 (significant) in group-B. The drug was found effective in both group-But comparatively group-A was better.
- **BMI:-**Improvement in BMI was seen in Group-A was 9.45%, which was statistically highly significant. In group-B % relief was 5.32% which was statistically highly significant. Comparatively result of group-A was better than group-B.

CONCLUSION: - *Nidan* and Symptoms of PCOS are similar to *Santarpananimitta rogas*, so line of treatment of *Santarpananimitta rogas* should be apply in the management of PCOS. *Haritki* with *Madhu* or with *Purana Guda* are effective and safe in the treatment of PCOS.
