Utility of *Samskāra* in preventive, curative and liberation aspect

*Dr. Rajesh Shivajirao Kolarkar ** Dr. Rajashree Kolarkar

*Professor and H.O.D. YMT Ayurvedic Medical College Kharghar Navi Mumbai. ** Professor Smt. K. G. Mittal Ayurvedic College Charny Road Mumbai.

**Abstract:** Ayurveda is the ocean of knowledge; especially diamond of the ocean. *Samskāra* is having a unique role in the fundamental principles of Ayurveda. It is inherently related to almost all branches of Ayurveda just like a fragrance of sandal. Either Dietary food or medicine whatever it may be needs proper *Samskāra* in order to maintain proper health. Hence the knowledge of *Samskāra* is very essential to the physician while combating with diseases using the medicine as per *Gundharmas* (Properties). The role of *Samskāra* in preventive as well as curative measure is very crucial because with the help of *Samskāra* we maintain the equilibrium of *Dosas* in healthy individual. Caraka clearly explained that (*Ca.Su.5/13*) one should take as a daily routine the articles which maintain the health and prevent the unborn diseases¹.

When we think critically it is clear that proper *Samskāras* are needed to our body and Mind. Caraka explained in (*Ca.Su.7/53*) sutra forsaking intellectual errors (*Pradnyāpradha*), pacification of sense organs, memory, and sound knowledge of place, time and self and following the code of good conduct this is the way shown for the prevention of exogenous diseases². In this way Acharya *caraka* not only focused the *Samskāras* about body but also about mind.

**Key words:** *Samskāra*, *Gundharmas* (Property), *Pradnyāpradha* (Intellectual error), exogenous diseases.

**Introduction:**

In Ayurveda, the word Samskara is introduced as “Samskaraohi Gunantradhyanam” सङ्कारोहि गुणानतराध्यानम *(Ca.Vi. 1/24)* which means qualitative improvement carried out by incorporating the specific qualities. *Desha*, *Kala*, and self should always keep in mind and all the hygiene properly should be followed then we can easily prevent all physical and mental disorders. Curative therapeutics i.e. *Samshodhana* (Expulsion of excess *dosās* by upward or downward direction) and shaman (Pacification of excess *Dosas* in the body) both are the part of *Samskāra*.

Abnormality (disorder) is disequilibrium of *Dhatus* and their equilibrium is health or normalcy. Health is known as happiness while disorder is unhappiness³. (*Ca.Su.-9/4*) Pacification of vitiated *dosās* it is a *Samskāra*.
One is in the twelvefold formula of dependent origination (paticca-samuppāda) in Pali literature, where the sankhāras are the second link in the series. They are said to be conditioned by ignorance and to function as a condition for consciousness. Putting together statements from various suttās, we can see that the sankhāras are the kammically active volitions responsible for generating rebirth and thus for sustaining the onward movement of samsara, the round of birth and death. In this context sankhāra is virtually synonymous with kamma, a word to which it is etymologically akin⁴.

### Discussion

It is said that Samskāra karanam matam – Samskāra is processing (Ca.Su.-26/34) again question arises that what is karana? Kriyate yat karanam Karana means action⁵. While describing Trayaupastambha Acharya caraka says that Ahara (Diet), Nidra (Sleep) and brahmacarya (Celibacy) are the three Upstambhas (Sub-pillars) of the body. If these three are observed properly and thus the body is supported well by these pillars, it continues well-endowed with strength, complexion and development till the completion of lifespan provided one abstains from harmful practice⁶. The Samskāras are responsible for that. By the avoiding of the harmful matters with respect to the body Samskāra plays crucial role.

The Parādi Guna named on the first attribute of the group para are ten in numbers and quoted by Caraka as those to be known mandatorily by the physician to ensure the successful treatment. A physician sans the knowledge of these ten attributes cannot practice in a proper way. Acārya caraka has emphasized regarding the study and knowledge of Samskāra in order to conduct precious therapeutics by the physician. He says that the knowledge of Paradi guna is inevitable for the purpose of siddhi in cikitsā.

These ten Guna are: Table I

<table>
<thead>
<tr>
<th>Paratva</th>
<th>Apartva</th>

<td>Practice</td>
</tr>
</tbody>
</table>

(Ca.Su.26/29/30)

Samskāra is transformation or processing. Samskāra Karanam matam Ca.Su.26/34

The Samskāra is the transformation or processing. This implies generally increasing the quality thus this is used in a positive sense. It is termed as Gunāntaradhām (Imbibing of new qualities) in Ayurveda parlance.

Prasastapāda described three types of Samskāra viz. Vega (Momentum), Bhavanā (Memory) and Sthitisthāpakatva (Elasticity): Table II

<table>
<thead>
<tr>
<th>Vega (Momentum)</th>
<th>This is the cause of motion in the formed Dravyas like the Panchmābhootha is the vega Samskāra. It prevents the floating substance from falling immediately to the ground.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bhavanā (Memory)</td>
<td>It is the cause of recalling or identifying the prior experienced subjects.</td>
</tr>
<tr>
<td>Sthitisthāpakatva (Elasticity)</td>
<td>The attribute responsible for bringing back the displaced object to the original position is the elasticity.</td>
</tr>
</tbody>
</table>
**Samskāra Utility in Ayurveda: Table III**

<table>
<thead>
<tr>
<th>Samskāra</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pārada Samskāra</td>
<td>The transformation of the Mercury. The backbone of Ayurveda Rasshātra Mercury (Pārad) is highly poisonous in the crude state is totally transformed into the ambrosia or panacea by the eighteen special processes termed as Samskāra. After these processes the transformed Pārada is used in medicinal preparation.</td>
</tr>
<tr>
<td>The Food processing</td>
<td>The raw material to be used as food is first transformed by various processes like the washing, peeling, and then cooked onto the fire to make it digestible and conducive to the body requirements. The whole of the food processing industry is based on the Samskāra. The Samskāra also removes the impurities if any in the material to be used and optimally utilized for the body.</td>
</tr>
<tr>
<td>Pharmacy</td>
<td>The medicinal preparations expect the transformation of the raw material to an utilizable form. The Bhavanā or impregnation of the material with the desired qualities is an excellent example of the Samsara.</td>
</tr>
</tbody>
</table>

Therefore the transformation processes augment the quality of the material and makes it suitable to be used in myriad forms.

Acharya Caraka while describing eight specific factors of method of dieting (Ashtahārvidhivisheshaytanani) has given details of Samskāra7.

**Karanam punha swabhavikanam Dravyamabhisamskarha….(Ca.Vim.1/2) Karanam /processing is the making or refinement of the natural products which means imparting other properties. These properties are infused by contact of water and fire (Agnisamskāra), cleansing, churning, place, time, infusing, steeping etc. and also by long duration utensil etc. Samskāra can be done through following methods: 1. Toya Sannikarsha (water treatment), 2. Agni Sannikarsha (fire treatment), 3. Toya-Agni Sannikarsha (water & fire Treatment) 4. Shoucha (Washing/ Cleaning) 5. Manthana (Churning) 6. Desha (Place) 7. Kaala (Season/Time factor) 8. Vaasana (Rendering Fragrance) 9. Bhavana (Levigation) 10. Kaala Prakarsha (Time duration) 11. Bhajana (Utensils) |

The Samskāras can make on both the āhara and medicinal drugs. Āhara is innumerable types because of the combinations of drugs and Samskāras on Drugs.

Aparisankheya vikalpa: Dravyasamyoगकaranabahulyat Ca.Su.25/36. It has innumerable variations due to abundance of substances, their combinations and preparations.

Some of the examples are: Caraka describing the importance of ghrita in jirna Jwara (Chronic fever) that all types of Jirna jwara (Chronic fever) intake of ghrit with proper drugs is recommended because grita pacifies Vāta due to unctuousness, Kaphā due to processing (Samskāra) pitta and heat due to coldness, hence in all chronic fevers Ghrita is wholesome like water on substances scorched fire. Focusing the Samskāranuvartanam quality of Ghrita Caraka has recommended siddha medicated Ghrita according to Dosas in Jirna Jwara8. (Ca.Nid.1/36)

Informing about the qualities of Ghrita Caraka quoted; cow ghrita promotes memory, intelligence, Agni, semen, Ojas, kapha, and medas: alleviates Vāta, Pitta, and Poison, insanity, phthisis, inauspiciousness and fever. It is the best for health. It has thousand potentialities and so, if used properly according to prescribed methods, exerts thousand types of actions. In this way thousands of actions can be performed by ghrita. Its potency can be increased by thousands of times if made specific appropriate samskāras9. (Ca.Su.27/232)
The same thing is told about taila (Sesame oil) also, the sesame oil is sweet with astringent as subsidiary taste, penetrating, hot, readily absorbed, aggravates Pitta and Kapha, is constipating, anti-diuretic, the best among the Vāta alleviating, strength promoting, beneficial for skin promotes intellect and appetite. It destroys all diseases due to combination of drugs and processing. Taila becomes elixir by Samskara\(^\text{10}\). Ca.Su.27-287

While describing the deictic incompatibility / Antagonistic food Caraka explained that Dehdhatupratyanik drugs make opposition to the Dehdhatus. That which is antagonistic in respect of Place (Desha viruddha), Time (Kala viruddha), Digestive fire (Agniviruddha), Dose (Matraviruddha), Suitability (Satmyaviruddha), Dosa, Processing (Samskaraviruddha), Potency (Viryaviruddha), Bowel (Koshtaviruddha), Health condition (Awasthaviruddha), Order (Kramaviruddha), Contraindication (Parihar viruddha), Indication (Upchar viruddha), Cooking (Pakaviruddha), Combination (Samyogviruddha), Palatability (Hridayaviruddha), richness in properties (Sampadviruddha), Rules of eating (Vidhiviruddha) is not wholesome for the person.

Antagonistic food is the cause of impotency(Shandhya), blindness(Andha), erysipelas(Visarpa), ascites(Jalodar), pustules (Visphot), insanity (Unmāda), fistula-in-ano (Bhagandar), fainting (Murchya), narcosis (Mada), Abdomen fullness (Adhmāna), spasm in throat (Galgraha), anaemia (Pându), āma (Toxins), Visa (Poison), leprosy (Kushta), grahaniroga (Tropical sprue), Oedema (Shotha), Acidity (Amlapitta), Fever (Jwara), rhinitis (Pinasa), genetic disorders (Santāndosha) and even death\(^\text{11}\). (Ca.Su.26-102,103)

Hence Caraka explained that for the prevention of the diseases due to dietic incompatibility in the beginning itself we should make the Samskāra of similar drugs on the body. In this way we can prevent such type of diseases. The process of Vamana (Emesis), Virechan (Purgation), should be carried out and samshana drugs should be administered in the body means such Samskāras should be done in the beginning itself. These are the measures which are used to counteract the above and other disorders caused by antagonistic such as emesis, purgation, use of antidotes for pacification and prior conditioning of the body with similar substances\(^\text{12}\). (Ca.Su.26-104). Ayurveda has given equal weightage to body as well as mind. The daily regimen, sessional, regimen, suppressible non-suppressible urges are emphasized by Acharya. Achar Rasayan is the speciality of Ayurveda. These regimen and āchar Rasayan is nothing but the Samskāras on the body and Mind.

It is clear that with the help of agnisamskara we can make the changes in the gunas (Quality) of the drugs. After proper Agnisamskar these drugs can be easily compatible to the body. This is the real task of Samskāras. If the cover of pulses removed and fried well then it becomes laghu and easily digestible to the body. Same thing for vegetables also if it boiled well and added sneha and other ingredients it becomes useful for the body otherwise it will create problems. Meat soup we can prepare with different types of drugs then it can acquire the same properties of the drugs and it becomes best doshshāmak. Godhuma is heavy (Guru) in nature but due to Samskāra makes it laghu (Light).

Kāla is also responsible factor for Samskāra. It can also change the quality of the drug. For eg; The new rice is madhur and Brimhan in nature but one year old rice is more useful sandhankar and mehar.(Su.Su 46/422) All the fruits are having good quality after complete ripen but Bilwa fruit is having good qualities at unripen stage. (Su.Su.46/209)

In the preparation of Panchvidh Kashay kalpanā specific Samskāras are required for the specific drug to achieve the highest potency of the drug. Samskāras are a series of rituals that mark the improvements in various stages of the human life. It plays the prime role in child health system and overall development at each step of life. It also prevents diseases, adapt to environment for further survival, give individual identity and educate the child.
Ayurveda is considered as the Upveda of Atharvaveda. Ancient mythology described sixteen to forty Sanskāra (religious rites) for a person from conception to Death but at present 16 Sanskāra are as in practiced which are performed from conception to after death. These Sanskāra are related to appropriate growth and development of person: 1.Garbhādhana (sacrament of impregnation or conception) 2.Pumsavāna (engendering a male issue) 3.Simantonayana (hair-parting) 4.Jatakarma (birth rituals e.g. At the time when the child is being born) 5.Nāmakarana (naming ceremony) 6.Nishakrama (first visit or outing ceremony) 7.Annapraśhāna (feeding ceremony) 8.Chudakarma or mundan (shaving of head) 9.Karnavedha (piercing the earlobes) 10.Upanayana (blessed thread initiation) 11.Vedarambha (beginning of Vedic study) 12.Samavartan (end of studentship) 13.Vānprastha (renouncing the householder’s life)14.Vānprastha (renouncing the householder’s life)15.Sanyyas (leading the life of a monk) 16.Anteyeshti (death cremation)13

Sanskāra in the Pali is sañkhāra a useful word to explore if you are struggling to make sense of Buddhist doctrines. This word is defined by Buddhists in many ways—volitional formations; mental impressions; conditioned phenomena; dispositions; forces that condition psychic activity; forces that shape moral and spiritual development.

sañkhāra also is the fourth of the Five Skandhas and the second link in the Twelve Links of Dependent Origination, so it's something that figures into many Buddhist teachings. It's also closely linked to karma.

According to Theravada Buddhist monk the word sañkhāra has no exact parallel in English. "The word sañkhāra is derived from the prefix sam, meaning 'together,' joined to the noun kara, doing, making. sañkhāra are thus 'co-doings,' things that act in concert with other things, or things that are made by a combination of other things. what are the Twelve Links? There are at least a couple of ways to understand them. Most commonly, the Twelve Links are the factors that cause beings to become, live, suffer, die, and become again. The Twelve Links also are sometimes described as the chain of mental activities that lead to suffering14.

The first link is avijja or ignorance, “Avijjā paccayā sañkhārā” (Ignorance as a root cause for immoral/unfruitful actions and thoughts). This is ignorance of the true nature of reality. Avijja leads to sañkhāra —mental formations— in the form of ideas about reality. We become attached to our ideas and unable to see them as illusions. Again, this is closely linked to karma. The force of mental formations leads to. viññāṇa, awareness. And that takes us to nama-rupa, name, and form, which is the beginning of our self-identity—I am. And on to the other eight links.

Major portion/segment of mind as described in Pali literature: viññāṇa - consciousness 6 viññāṇa (eye, ear, tongue, nose, mind, body), saññā - perception - job is to recognise and evaluation, vedanā, - sensation, sañkhāra - job is to react, this gives fruit, this is the volition of the mind. Types of sañkhāra are like line drawn on water, like line drawn on sand on beach and like line drawn on rock, deep line15.

When we put the word sañkhāra under our microscope, we see compressed within it the entire worldview of the Dhamma. The active sañkhāra consisting in kammically active volitions perpetually create the sañkhāra of the five aggregates that constitute our being. As long as we continue to identify with the five aggregates (the work of ignorance) and to seek enjoyment in them (the work of craving), we go on spewing out the volitional formations that build up future combinations of aggregates. Just that is the nature of samsara: an unbroken procession of empty but efficient sañkhāra producing still other sañkhāra, riding up in fresh waves with each new birth, swelling to a crest, and then crashing down into old age, illness, and death. Yet on it goes, shrouded in the delusion that we're really in control, sustained by an ever-tantalizing, ever receding hope of final satisfaction.
When, however, we take up the practice of the Dhamma, we apply a brake to this relentless generation of saṅkhāra. We learn to see the true nature of the saṅkhāra, of our own five aggregates: as unstable, conditioned processes rolling on with no one in charge. Thereby we switch off the engine driven by ignorance and craving, and the process of kammic construction, the production of active saṅkhāra, is effectively deconstructed. By putting an end to the constructing of conditioned reality, we open the door to what is ever-present but not constructed, not conditioned: the asankhata-dhatu, the unconditioned element. This is Nibbana, the Deathless, the stilling of volitional activities, the final liberation from all conditioned formations.

**Conclusion**

Drugs can be easily compatible to the body due to Samskāra

If physician wants to succeed in the treatment the knowledge of Samskāras is essential (*Siddhiupaya*)

If you want to maintain health (*Swashtya*) then Samskāras are helpful in preventive aspect also.

Different types of medicine preparation needs various Samskāras. It has innumerable variations due to abundance of substances their combinations and preparations.

*Samskāras are necessary for detoxification (Shodhana)*

We can increase useful properties and decrease harmful properties of food and medicines through Samskāra

Not only preventive and curative but also spiritually for the emancipation Samskāra plays very vital role as per Pāli literature teaching of the Buddha.
