A STUDY ON RELATIONSHIP OF SCHOOL ENVIRONMENT AND ACADEMIC ACHIEVEMENT OF 12th CLASS STUDENTS IN KARNATAKA

Dr. Arunakumari T.
Principal,
S.R.K. College of Education,
Raichur (Karnataka)

Abstract:
The present study was done to find out the relationship between school environment and academic achievement of 12th class students. The study was conducted in the government and private Senior Secondary Schools located in the urban and rural areas of Raichur district in Karnataka. The total sample consisted of 400 students of 12th class: 200 from government Senior Secondary Schools and 200 from private Senior Secondary Schools. Random sampling method was used for collecting the data. Scores obtained by students of class 12th in the final examination of previous class were taken for academic achievement and School environment inventory by Misra, K. S. (2002) was used. To analyze data ‘t’ test and Pearson product moment correlation were used. The findings show there is a significant relationship between school environment and academic achievement of 12th class students.

Keywords:
School Environment, Academic Achievement, Students.

1. Introduction:

Education is the process of developing the capacities and potentials of the individual so as to prepare that individual to be successful in a specific society or culture. Education, in its broadest sense, may be defined as a process designed to inculcate the knowledge, skills and attitudes necessary to enable individuals to cope effectively with their environment. Its primary purpose is to foster and promote the self-realization in the individual. Achieving this goal requires understanding of commitment to the proposition that education is a primary instrument for social and economic advancement of human welfare (Verma & Sinha, 1990).
The world is becoming more and more competitive. Quality of performance has become the key factor for personal progress. This desire for a high level of achievement exerts a lot of pressure on students, teachers, Senior Secondary Schools and in general the education system itself. In fact, it appears as if the whole system of education revolves round the academic achievement of students, though various other outcomes are also expected from the system. Thus a lot of time and effort of the Senior Secondary Schools are used for helping students to achieve better in their scholastic endeavors (Ramaswamy, 1990).

The classroom environment is of great importance as far as academic achievement is concerns. It is difficult to establish a direct casual link between positive classroom environment and academic achievement because of the many variables involved. However there is a proven relationship between these two aspects of education. Numerous studies have clearly demonstrated that leaning environment has a social outcome at all grades (Fraser, 1994; McRobbie & Fraser, 1993).

2. Significance of the Study:

A school should have the environment in which students feel physically as well as intellectually safe. Students’ learning is hindered if they fear that they might be bullied or beaten up. Students must feel that it is okay for them to take chances academically and to risk being wrong, this provide them intellectual security. Students must feel that they are supported in their efforts to learn. If a school is safe in these two ways, it will have a chance to be an effective school. Students and teachers must both feel safe and inspired in order to achieve great things. Safety includes physical safety as well as emotional safety – the ability to speak freely and without fear of shame or reprisal. School environments are social environments and the standard model of teaching and learning is an interactive model, so social skills are vital for students to successfully integrate into the setting. A school environment has broad influence on students’ learning and growth, including major aspects of their social, emotional, and ethical development. This led the investigator to find out the relationship between the school environment and academic achievement of students.

3. Statement of the Problem:

SCHOOL ENVIRONMENT AND ACADEMIC ACHIEVEMENT OF 12TH CLASS STUDENTS IN KARNATAKA

4. School Environment

School Environment is the physical and aesthetic surroundings and the psychosocial climate and culture of the school. Factors that influence the physical environment include the school building and the area surrounding it, any biological or chemical agents that are detrimental to health, and physical conditions such as temperature, noise, and lighting. The psychological environment includes the physical, emotional, and social conditions that affect the well-being of students and staff. In the present study school environment mean the score obtained on school environment inventory which is developed by Mishra, K.S. (2002).
The school environment is of paramount importance in shaping and reshaping intellectual ability. Supportive and favourable school environment enriched with enough learning facilities, and favourable climate makes students more comfortable, more concentrated on their academic activities that resulted in high academic performance. When students find their school environment to be supportive and caring, they are less likely to become involved in substance abuse, violence, and other problem behaviors (Hawkins, Catalano, Kosterman, Abbott, & Hill 1999; Battistich & Hom 1997; Resnick et al. 1997). They are more likely to develop positive attitudes toward themselves and prosocial attitudes and behaviors to others (Schaps, Battistich, & Solomon 1997). Much of the available research shows that supportive schools foster these positive outcomes by promoting students’ sense of “connectedness” (Resnick et al. 1997), “belongingness” (Baumeister & Leary 1995), or “community” (Schaps, Battistich, & Solomon 1997) during the school day.

5. Academic Achievement:

Academic achievement can be defined as excellence in all academic disciplines, in class as well as extracurricular activities. It includes excellence in behavior, confidence, communication skills, punctuality, assertiveness, arts, culture, and the like. The achievement level of the student is taken as the scores obtained by the students of class 12th in the previous class final examinations.

6. Objectives:

1. To study the relationship between school environment and the academic achievement of 12th class students.
2. To compare the school environment of govt. school and non govt. school of district Raichur.
3. To compare the school environment of govt. school situated in rural and urban area.
4. To compare the school environment of non govt. school situated in rural and urban area.

7. Hypotheses:

1. There is no significant relationship between school environment and academic achievement of 12th class students.
2. There is no significant difference between school environment of govt. and non govt. school of Raichur district.
3. There is no significant difference between school environment of govt. school situated in rural and urban area.
4. There is no significant difference between school environment of non govt. school situated in rural and urban area.

8. Delimitation of Study:

The present study was delimited to the class 12th students of government and private Senior Secondary Schools in urban and rural areas of Raichur district in Karnataka.

9. Method:

School environment inventory by Misra, K. S. (2002) was used for data collection. The academic achievement was taken as the scores of class 12th students obtained by them in the previous class final examination.
The present study used descriptive survey method. Population of the study consisted of the students of 12th class in government and private Senior Secondary Schools in urban and rural areas of Raichur district in Karnataka. Simple random sampling was used to collect the data from 400 students of 12th class from the six govt. Senior Secondary Schools (200 students) and three private Senior Secondary Schools (200 students) of Raichur district in Karnataka.

For analyzing data ‘t’ test and Pearson's product moment correlation were used as the statistical techniques.

10. Data Analysis and Findings:

Following are the findings after data analysis based on the hypothesis:

**Table - 1: Difference in the School Environment of Govt. & Private School**

<table>
<thead>
<tr>
<th>School Environment</th>
<th>Type of school</th>
<th>N</th>
<th>M</th>
<th>SD</th>
<th>Df</th>
<th>t-value</th>
<th>Significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Govt.</td>
<td>200</td>
<td>185.23</td>
<td>29.45</td>
<td>396</td>
<td>9.52</td>
<td>Significant</td>
<td></td>
</tr>
<tr>
<td>Non-Govt.</td>
<td>200</td>
<td>201.44</td>
<td>21.45</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table 1 shows that there is significant difference between school environment of Govt. and Non-Govt. school of district Raichur. The result indicates that non-government school (M =185.23) have better school environment than the government Senior Secondary Schools (M =201.44) in district Raichur.

**Fig.-1: Difference in the School Environment of Govt. & Private School**

<table>
<thead>
<tr>
<th>Mean Value</th>
<th>School Environment</th>
</tr>
</thead>
<tbody>
<tr>
<td>185.23</td>
<td>Govt.</td>
</tr>
<tr>
<td>201.44</td>
<td>Non-Govt.</td>
</tr>
</tbody>
</table>

**Table-2: Difference in the School Environment of Urban and Rural Govt. Senior Secondary Schools**

<table>
<thead>
<tr>
<th>School Environment</th>
<th>Govt. Senior Secondary Schools</th>
<th>N</th>
<th>M</th>
<th>SD</th>
<th>Df</th>
<th>t-value</th>
<th>Significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rural</td>
<td>100</td>
<td>170.54</td>
<td>30.16</td>
<td>198</td>
<td>6.48</td>
<td>Significant</td>
<td></td>
</tr>
<tr>
<td>Urban</td>
<td>100</td>
<td>192.87</td>
<td>28.42</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Table-2: shows that there is significant difference between school environments of 12th class students studying in govt. school situated in rural and urban area. The finding indicates that government school in urban area (M =192.87) have better school environment than the government Senior Secondary Schools in rural area (170.54) of district Raichur. The present results are in congruence with the study by Verma (1984) that urban Senior Secondary Schools have a better classroom environment than the rural Senior Secondary Schools.

Table 3: Difference in the School Environment of Urban and Rural Non-Govt. School

| School Environment | Non-Govt. Senior Secondary Schools | | | | |
|---------------------|-----------------------------------|---|---|---|---|---|
|                     | N | M | SD | Df | t-value | Significance |
| Rural               | 100 | 178.94 | 28.45 | 198 | 8.24 | Significant |
| Urban               | 100 | 198.57 | 21.54 | | | |

Table-3, shows that there is significant difference between school environment of 12th class students studying in non govt. school situated in rural and urban area. This suggests that the classroom environment in non govt. Senior Secondary Schools situated in urban and rural area is different.

Fig.-2: Difference in the School Environment of Urban and Rural Govt. Senior Secondary Schools

Fig.-3: Difference in the School Environment of Urban and Rural Non-Govt. School
Table- 4: Relationship between School Environment and Academic Achievement.

<table>
<thead>
<tr>
<th>School Environment and Academic Achievement</th>
<th>Sample size (N)</th>
<th>Coefficient of correlation</th>
<th>Significance</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>300</td>
<td>0.854</td>
<td>Significant</td>
</tr>
</tbody>
</table>

In table-4: the coefficient of correlation shows there is significant relationship between school environment and academic achievement of 12th class students. This result is in congruence with the previous studies by Pierce (1994); Ramana (1997) that the performance of the students depends upon the classroom learning environment, as the classroom learning environment becomes better, the performance of the students also increases.

11. Findings:

The main conclusions drawn from the present study on “A study on relationship of school environment and Academic Achievement of 12th class students in Karnataka” are following:

1. There is significant relationship between school environment and the academic achievement of 12th class students.
2. There is significant difference between school environment of Govt. and non-Govt. school of district Raichur.
3. There is significant difference between school environment of govt. school situated in rural and urban area.
4. There is significant difference between school environment of non govt. school situated in rural and urban area.

12. Conclusions

From finding it can be concluded that for better performance of the students, Senior Secondary Schools need to provide positive classroom environment as the two are related. It is evident that better the school environment, higher will be performance of the students. This lays the responsibility on the Senior Secondary Schools to provide good physical and aesthetic environment where proper psychological and social development of the students can take place. To improve the environment of the Senior Secondary Schools more and more activities should be organized in the school so that students take interest in the activities and their physical as well as mental health can be improved. Teacher should use innovative ideas and try to inculcate healthy habit among students by using new methods and techniques according to their age, interest, abilities and aptitude of the students. They should also have sympathetic and cooperative attitude towards students. So, better the school environment, better will be the academic performance of the student and also there will be proper development of the students.
