Formulation And Evaluation Of Herbal Shampoo

Altaf Sharif Shaikh, Prof.S.B.Deshmukh, and Dr.Santosh Jain Sir. Aditya Institute Of Pharmaceuticals, Beed. Dr.Babasaheb Ambedkar Technological University, Lonere

**Abstract**— The objective of this study is to formulate and evaluate poly-herbal shampoo for cosmetic purpose from herbal ingredients. Hibiscus powder, Neem powder, Henna powder, Amla powder, Shikakai powder, Ritha powder, Alo vera gel was procured from local market in powdered form also gel form. Banyan root powder and Soya milk is prepared by homemade method, then prepared decoction of these ingredients and mixing with each other and evaluated for its organoleptic and physico-chemical characteristics. Herbal shampoo is used for cleansing of the hair also conditioning, smoothing, of the hair surface, good health of hair, hair free of dandruff, dirt grease and lice above all, it's safety benefits are expected.

**KEYWORDS** Herbal shampoo; Eclipta prostrata, Sapindus indica, Evaluation of shampoo.

**INTRODUCTION:** Shampoos are most probably used as cosmetics. It is a hair care product that is used for cleaning scalp and hair in our daily life. Shampoos are most likely utilized as beautifying agents and are a viscous solution of detergents containing suitable additives preservatives and active ingredients. It is usually applied on wet hair, massaging into the hair, and cleansed by rinsing with water. The purpose of using shampoo is to remove dirt that is build up on the hair without stripping out much of the sebum. Many synthetic shampoos are present in the current market both medicated and non medicated; however, herbal shampoo popularized due to natural origin which is safer, increases consumer demand and free from side effects. In synthetic shampoo, surfactants (synthetic) are added mainly for their cleansing and foaming property, but the continuous use of these surfactants leads to serious effects such as eye irritation, scalp irritation, loss of hair, and dryness of hairs. Alternative to synthetic shampoo we can use shampoos containing natural herbals. However, formulating cosmetic products containing only natural substances are very difficult. There are a number of medicinal plants with potential effects on hair used traditionally over years around the world and are incorporated in shampoo formulation. These medicinal plants may be used in extracts form, their powdered form, crude form, or their derivatives.

**BENEFITS OF HERBAL SHAMPOO**
1. More Shine
2. Less Hair Loss
3. Long Lasting Colour
4. Stronger and More Fortified Hairs
5. All Natural, No Chemicals
6. Won’t Irritate Skin or Scalp
7. Keep Healthy Natural Oil

**FIG.2 RITHA**

**FUNCTION OF HEARBAL SHAMPOO**
- Lubrication
- Conditioning
- Hair Growth
- Maintenance of HairColour
- Medication.
ADAVANTAGES OF HERBAL SHAMPOO

- Pure and Organic Ingredient
- Free from Side Effects
- No Surfactants

Fig no: 3 Natural shampoo

Fig no: 4 soap nut extract

1. Amla Extract :-
A. Strengthen the Scalp and Hair.
B. Reduce premature pigment loss from hair, or greying.
C. Stimulate Hair Growth. iv. Reduce Hair Loss.
D. Prevent or treat dandruff and dry scalp.
E. Prevent or treat Fungal and Bacterial hair and Scalp infections.
F. Improve overall appearance of Hairs

Fig no:5 Amla Extract

USE OF INGREDIENTS

Soap Nut Extract –

a. Stops Hair Fall
b. Prevents Dandruff
c. Fight Against Scalp Infection

Fig no: 3 Natural shampoo

INGREDIENTS

1. Shikakai Extract :-
- Cleanses Hair.
- Add more Shine to the Hairs.
- Prevents Grays.
- Crubs Hair Loss
- Prevents Lice, Psoriasis, Eczema & Scabies.
- Provides Nourishment to the hair and promote healthy and rapid hair growth.
- Prevents Split ends.
**FORMULATION OF HERBAL SHAMPOO**

Formulation of the herbal shampoo was done as per the formula given in Table 1. To the gelatin solution (10%), added the herbal extract and mixed by shaking continuously at the time interval of 20 min. 1 ml of lemon juice was also added with constant stirring. To improve the formulation, sufficient quantity of essential oil (rose oil) was added and made up to 100 ml with gelatin.

**EVALUATION OF HERBAL SHAMPOO :-**

1) **Organoleptic evaluation :-**

Organoleptic evaluation on the parameters like colour, odour taste and texture was carried out. Colour and texture was evaluated by vision and touch sensation respectively. For taste and odour evaluation a team of five taste and odour sensitive persons was formed and random sampling was performed.

**General powder characteristics:**

General powder characteristics includes evaluation of those parameters which are going to affect the external properties (like flow properties, appearance, packaging criteria etc.) of the preparation. Characteristics evaluated under this section are powder form, particle size angle of repose and bulk density. Sample for all these evaluation were taken at three different level i.e. from top, middle and lower level.

**Particle size**

Particle size is a parameter, which affect various properties like spreadability, grittiness etc., particle size was determined by sieving method by using LP. Standard sieves by mechanical shaking for 10 min.

**Angle of repose**

It is defined as the maximum angle possible in between the surface of pile of powder to the horizontal plane. Funnel method Required quality of dried powder is taken in a funnel placed at a height of 6 cm from a horizontal base. The powder was allowed to flow to form a heap over the paper on the horizontal plane. The height and radius of the powder was noted and recorded. The angle of repose ($\theta$) can be calculated by using the formula. Open ended cylinder method.

$$\tan \theta = \frac{h}{r}$$

where, $\theta$ – Angle of repose, $h$ – Height of the heap, $r$ – Radius of the base.

**Bulk density**

Bulk Density is the ratio between the given mass of a powder and its bulk volume. Required amount of the powder is dried and filled in a 50 ml measuring cylinder up to 50 ml mark. Then the cylinder is dropped onto a hard wood surface from a height of 1 inch at 2 second intervals. The volume of the powder is measured. Then the powder is weighed. This is repeated to get average values. The Bulk Density is calculated by using the below given formula.
Hair loss is a complicated situation and can be caused by any one of many things.

One of the most common causes is an imbalance in hormones, which cannot be treated by shampoos.

Specifically, high DHT levels are the most common cause of alopecia in men and noshampoo alone can block DHT from causing your hair to fall out if you are already experiencing it.

**RESULT:**

The shampoo was formulated by admixing the equal amount of the aqueous extracts of all the ingredients with soap nut. The above plant extract contains phytoconstituents like saponins which is a natural surfactant having detergent property and foaming property. An ideal shampoo must have adequate viscosity and many natural substances possess good viscosity. The gelatin solution (10%) behaves as a pseudoplastic forming clear solutions.

Lemon juice (1 ml) added to the shampoo serves as anti-dandruff agent, natural antioxidant, and chelating agent, and maintains the acidic pH in the formulation.

**CONCLUSION**

The present study was carried out with the aim of preparing the herbal shampoo that reduces hair loss during combing, safer than the chemical conditioning agents as well as to strengthen the hair growth. Herbal shampoo was formulated with the aqueous extract of medicinal plants that are commonly used for cleansing hair traditionally. Use of conditioning agents (synthetic) reduces the protein or hair loss. To provide the effective conditioning effects, the present study involves the use of shikakai, amla, and other plant extracts instead of synthetic cationic conditioners. The main purpose behind this investigation was to develop a stable and functionally effective shampoo by excluding all types of synthetic additives, which are normally incorporated in such formulations. To evaluate for good product performance of the prepared shampoo, many tests were performed. The results of the evaluation study of the developed shampoo revealed a comparable result for quality control test, but further scientific validation is needed for its overall quality.
